QUESTION	1	2	3	4
POINTS	14 / 14	18 / 30	20 / 38	6 / 18

Instructions

ATTENTION!!!!!!

You have only one try.
Write down all work on paper and submit on Brightspace in the section Assignments.

For Q1: you do not need to use table in Appendix. Just use calculator or software. #####

Assignment Submission

For this assignment, you submit the entire assignment.

Assignment Scoring

Your last submission is used for your score.

1. [14 / 14 Points]

DevoreStat9 4.4.059

Let X = the time between two successive arrivals at the drive-up window of a local bank. If X has an exponential distribution with $\lambda = 1$, (which is identical to a standard gamma distribution with $\alpha = 1$), compute the following. (If necessary, round your answer to three decimal places.)

- (a) the expected time between two successive arrivals

1 ✓
- (b) the standard deviation of the time between successive arrivals

1 ✓
- (c) $P(X \leq 3)$

.950 ✓
- (d) $P(2 \leq X \leq 5)$

0.129 ✓

You may need to use the appropriate table in the [Appendix of Tables](#)

Using Probability Tree Properties to Complete a Tree

In the probability tree diagram below, the numbers represent positions where certain probabilities are written.

We are given the following probabilities.

$$P(A \& C) = 0.24$$

$$P(C|A) = 0.8$$

$$P(B \& C) = 0.35$$

Use the properties of probability trees to complete the tree. Enter the number of the probabilities for each position of the tree.

PRACTICE ANOTHER

A 12-inch bar that is clamped at both ends is to be subjected to an increasing amount of stress until it snaps. Let Y = the distance from the left end at which the break occurs. Suppose Y has the following pdf.

$$f(y) = \begin{cases} \left(\frac{1}{24}\right)\left(1 - \frac{y}{12}\right) & 0 \leq y \leq 12 \\ 0 & \text{otherwise} \end{cases}$$

(a) Compute the cdf of Y .

$$F(y) = \begin{cases} 0 & y < 0 \\ \frac{y^2(18-y)}{864} & 0 \leq y \leq 12 \\ 1 & y > 12 \end{cases}$$

Graph the cdf of Y .(b) Compute $P(Y \leq 4)$, $P(Y > 6)$, and $P(4 \leq Y \leq 6)$. (Round your answers to three decimal places.)

$$\begin{aligned} P(Y \leq 4) &= 0.259 \checkmark \\ P(Y > 6) &= 0.5 \checkmark \\ P(4 \leq Y \leq 6) &= 0.241 \checkmark \end{aligned}$$

(c) Compute $E(Y)$, $E(Y^2)$, and $V(Y)$.

$$\begin{aligned} E(Y) &= \text{(No Response)} \times \text{in} \\ E(Y^2) &= \text{(No Response)} \times \text{in}^2 \\ V(Y) &= \text{(No Response)} \times \text{in}^2 \end{aligned}$$

PRACTICE ANOTHER

In each case, determine the value of the constant c that makes the probability statement correct. (Round your answers to two decimal places.)

 **USE SALT**

(a) $\Phi(c) = 0.9834$

(b) $P(0 \leq Z \leq c) = 0.2967$

(c) $P(c \leq Z) = 0.1357$

You may need to use the appropriate table in the [Appendix of Tables](#) to answer this question.
