SUMMARY

Software Engineer Intern with 2+ years of experience in AI/ML-focused software development, specializing in building web and mobile applications. Developed innovative AI tools for education addressing complex industry challenges. Proficient in Python, React, and machine learning, with significant achievements in cross-platform Flutter apps and AI NLP systems

EDUCATION

Georgia Institute of Technology

Master of Science, Computer Science and Machine learning.

Feb 2026 - Dec 2027

John Jay College of Criminal Justice

Bachelor of Science, Computer Science and Information Security

Aug 2024 - Dec 2025

SKILLS

Programming Languages: Python, TypeScript, JavaScript, Perl, SQL, Go, C/C++ Language, Dart

Frameworks: React, Next.js, Flask, Django, FastAPI, Flutter

Libraries: PyTorch, TensorFlow, NumPy, Pandas, OpenCV, Three

Tools and operating system: Git, Docker, Figma, Unix, Linux, Microsoft Office, CI/CD, Claude code

Leadership: tutoring, mentoring, team management, software development management

Certification: MITx 6.00.2x Introduction to Computational Thinking and Data Science, Machine Learning by Stanford University, AI Engineering Specialization by IBM, Deep Learning Specialization by DeepLearning.AI

EXPERIENCE

EZducate

Jun 2025-Sep 2025

Software Engineer Intern

- **AI Integration:** Pioneered RAG-powered learning system using ChromaDB and Cohere Re-ranking for intelligent quiz generation and document analysis.
- **Full-Stack Development:** Designed scalable Flutter/FastAPI architecture with PostgreSQL, Redis, and Docker containerization.
- **Real-Time Features:** Implemented WebSocket AI chat with streaming OpenAI GPT-4o-mini responses and GPT-4 Vision image analysis.
- **Global Platform:** Built internationalization for 4 languages with RTL support and secure Firebase authentication
- **DevOps Excellence:** Established comprehensive CI/CD pipeline with automated testing and multi-platform deployment

Borough of Manhattan Community College

Mar 2022 - Sep 2024

Math and Computer Programming Tutor

- Provided tutoring for students to excel in math and computer programming courses. ‘
- Conducted group study sessions and built meaningful connections with students.

RifTech

Feb 2020 - May 2020

Software Engineer

- Constructed NLP applications for true/false question generation, text summarization, and multiple-choice quiz generation. Utilized Google BERT framework for NLP tasks.
- Developed a REST API using FastAPI and PostgreSQL to store data from learning management systems.
- Developed, tested, and deployed web interfaces using React, Tailwind CSS, and TypeScript.

PROJECTS

Full-Stack Developer | Multimodal Enterprise RAG System | 2025

- Led end-to-end development of a production-ready Multimodal RAG (Retrieval-Augmented Generation) platform for enterprise document intelligence and multimodal knowledge discovery.
- Designed full-stack architecture integrating Next.js 15 frontend with FastAPI microservices backend, enabling real-time AI processing of PDFs, text, images, audio, and video.
- Implemented hybrid search combining vector, graph, and keyword retrieval with interactive knowledge graph visualization and performance analytics.
- Engineered scalable, secure infrastructure using PostgreSQL, Neo4j, Qdrant, and Redis, achieving 99.5% uptime and supporting 500+ concurrent users.
- Delivered Dockerized, CI/CD-enabled, and fully tested application with JWT authentication and role-based access control, completing 95% of production scope.

Question Generator for Students and Professors

- Developed an AI-powered question generation tool using Python, NLP, and machine learning models
- Built responsive front-end with Next.js (SSR) and implemented JWT authentication via API routes
- Created Flask RESTful API backend for NLP processing and database operations
- Utilized NLTK and spaCy for text analysis to generate multiple-choice and open-ended questions
- Designed separate interfaces for students (self-study) and professors (exam preparation)

E-Commerce Platform

- Implemented RESTful APIs using Django Rest Framework and state management with Redux. Integrated Stripe for payments, user authentication, and core e-commerce features
- Utilized PostgreSQL for data storage and deployed using Docker for scalability
